@finestonematt would be interested in conducting a AMA over on @EthlancerEli to discuss GameStop's #NFT platform & the rollup tech stack? Ethlance is planning another AMA series & would love to see u there after enjoying your @BanklessHQ interview during the @loopringorg days.

NFT Collectibles

Confirmed: Gods Unchained, Crypto Kitties

Potential uses:
Trade NFT in person (comic book store/trading card analogy)
Used game trade in/digital licensing entitlement
allow legal ROM downloads of old school games for emulators?
Wider NFT marketplace partnering with established companies like CryptoKitties

Smart contracts allow for extreme flexibility in allowing creation, minting, transfer, and destruction of tokens on the blockchain.

Crypto Swap/Exchange

Swap between BTC/ETH/USD/AltCoin
Could partner with an established company (i.e. Coinbase/Binance/Grayscale)

Use an official GME app to interact with GME's platform, exchange between external wallets and GME Tokens/Coins

Exchange GME Tokens for GME Coin (shareholder dividend redemption)
- if there is a way to purchase/auction/convert GME Tokens from an established cryptocurrency, there is some potential to alleviate some of the concerns that arose during the Overstock case where the token issued prevented any legitimate share selling in addition to abusive/illegal/naked shorting.

In-game item transfer/entitlement in between platforms (for cross-platform games). Possibility for a major partnership with Valve/Steam to allow for wider trading of their in-game digital items in upcoming game of GME gaming cafes and store locations.

Shareholder Perk/NFT

Gamestop (GME) ERC-721 is a token with a quantity of 1 and a supply of 0. ERC-721 is typically used as unique NFT instead of ERC-20's fungible currency.

The ERC-721 token (or something like it) could be minted/issued one-per-shareholder as a unique shareholder NFT. Perhaps with an ID like 'shareholder # x' or 'share # x'? Essentially as a proof of concept for a blockchain backed securities exchange. ERC-1155 would support a fractionalized NFT concept similar to stocks.

Token Gamestop
Overview (ERC-721)
Max Total Supply: 0 GME
Holders: 1
Transfers: 1

Special Dividend/Crypto – GameStop ERC-20 Token/GME Coin

GameStop (GME) ERC-20 is a token with a quantity of 69,420,000 minted. A large amount has been transferred into Uniswap and to over 60 other destinations.

Caution: I am about 98% confident that this is a fairly clever scam. This is a topic that has had a lot of coverage on superstonk, but I haven't seen anyone dig into the transaction history prior to this to draw a connection to the other scam token yet.

GME Coin is another ERC-20 token with a supply of 12,000,000. I can't find any concrete links to legitimate GME dev work, but I also can't find conclusive proof of a scam. If it is not a scam, it could be used as either a shareholder dividend/perk, or an in-store currency.

Fungible vs Non-Fungible Tokens

Fungible Token are interchangeable
Such tokens are interchangeable and can be exchanged with any other token of the equivalent kind. For example, flat currencies are fungible. For example, $50 notes are interchangeable with other $50 notes. Similarly, one Bitcoin value can be exchanged with other Bitcoin, which makes no difference for holders.

Non-Fungible are Non-Interchangeable
Unlike Fungible tokens, such tokens are non-interchangeable as they cannot be replaced with the non-fungible token of the same type.

Fungible Tokens are Divisible
These tokens can be divisible into smaller units, and one can get any number of units, and it does not matter to holders as long as the value remains the same.

Non-Fungible Tokens are Non-Divisible
These tokens cannot be divided in any sense.

Fungible Tokens are Uniform
Each token is different from all other tokens of the same type.

Non-Fungible Ones are Unique
All tokens of each type are identical in specification, and each token is identical to each other. (src: blockchain-council.org)

Social Profiles: Not Available, Update ?

What's the difference with ERC20 tokens? Well, while an ERC20 token represents a single type of asset, an ERC721 token represents a class of assets. In the case of CryptoKitties, its ERC721 token contract represents ALL the unique kitties in the game, as well as who owns which. (src: blog.coinmarketcap.com)

Replying to @fxfoobar
Thanks for the clarification! Looks exciting either way. If possible can I ask, is the GameStop (GME) token with 69,420,000 tokens associated with the NFT? Just wondering because there has a transfer of 420,69 to the legit 1337 contract yesterday. Thanks!

GME ERC-20 Token Activity and Holders 7/8/21 11A CDT
The ERC-20 token has seen a large amount of activity recently, with the largest number of transfers on 7/3. It appears they have loaded a large number of the tokens (over 50%) into Uniswap and distributed from there to a number of destination addresses. This token appears to be a scam.

Largest 3rd Party Holder of GME ERC-20 (1.4M) – Lots of individual ties to Nigeria, but also some possibly semi-legitimate gaming/blockchain connections. Leaning toward it being a scam but not 100% confident.
