# Potential GME Crypto Uses and Current Status 7/9/21 DD and Speculation by /u/schismsaints

NFT Collectibles

Confirmed: Gods Unchained, Crypto Kitties

Potential uses:
- Trade NFT in person (comic book store/trading card analogy)
- Used game trade-in/digital licensing entitlement
- allow legal ROM downloads of old school games for emulators?
- Wider NFT marketplace partnering with established companies like CryptoKitties

Smart contracts allow for extreme flexibility in allowing creation, minting, transfer, and destruction of tokens on the blockchain.

Crypto Swap/Exchange

Swap between BTC/ETH/USD/AltCoin
Could partner with an established company (i.e. Coinbase/Binance/Grayscale)

Use an official GME app to interact with GME's platform, exchange between external wallets and GME Tokens/Coins

Exchange GME Tokens for GME Coin (shareholder dividend redemption)
- if there is a way to purchase/auction/convert GME Tokens from an established cryptocurrency, there is some potential to alleviate some of the concerns that arose during the Overstock case where the token issued prevented any legitimate short selling in addition to abusive/illegal/naked shorting.

In-game item transfer/entitlement in between platforms (for cross-platform games). Possibility for a major partnership with Valve/Steam to allow for wider trading of their in-game digital items in-person at GME gaming cafes and store locations.

Shareholder Perk/NFT

Gamestop (GME) ERC-721 is a token with a quantity of 1 and a supply of 0. ERC-721 is typically used as unique NFT instead of ERC-20's fungible currency.

The ERC-721 token (or something like it) could be minted/issued one per-shareholder as a unique shareholder ID NFT. Perhaps with an ID like 'shareholder # x' or 'share # x'? Essentially as a proof of concept for a blockchain backed securities exchange. ERC-1155 would support a fractionalized NFT concept similar to stocks.

Token Gamestop

Overview (ERC-721)

Max Total Supply: 0 GME

Holders: 1

Transfers: 1

Special Dividend/Crypto – GameStop ERC-20 Token/GME Coin

GameStop (GME) ERC-20 is a token with a quantity of 69,420,000 minted. A large amount has been transferred into Uniswap and to over 60 other destinations.

Caution: I am about 98% confident that this is a fairly clever scam. This is a scope that has had a lot of coverage on superstonk, but I haven't seen anyone dig into the transaction history prior to this or draw a connection to the other scam token yet

GME Coin is another ERC-20 token with a supply of 12,000,000. I can't find any concrete links to legitimate GME dev work, but I also can't find obvious proof of a scam. If it is not a scam, it could be used as either a shareholder dividend/perk, or an in-store currency.

Overview (ERC-20)

Max Total Supply: 69,420,000 GME

Fungible vs Non-Fungible Tokens

Fungible are Interchangeable
Such tokens are interchangeable and can be exchanged with any other token of the equivalent kind. For example, fiat currencies are fungible. For example, $50 notes are interchangeable with other $50 notes. Similarly, one Bitcoin value can be exchanged with other Bitcoin, which makes no difference for holders.

Non-Fungible are Non-Interchangeable
Unlike Fungible tokens, such tokens are non-interchangeable as they cannot be replaced with the non-fungible token of the same type.

Fungible Tokens are Divisible
These tokens can be divisible into smaller units, and one can get any number of units, and it does not matter to holders as long as the value remains the same.

Non-Fungible Tokens are Non-Divisible
These tokens cannot be divided in any sense.

Fungible Tokens are Uniform
Each token is different from all other tokens of the same type.

Non-Fungible Ones are Unique
All tokens of each type are identical in specification, and each token is identical to each other. (src: blockchain-council.org)

Atreyu @trhrower1 · Jun 28
Replying to @0xfoobar
Thanks for the clarification! Looks exciting either way. If possible can I ask, is the GameStop (GME) token with 69,420,000 tokens associated with the NFT? Just wondering because there was a transfer of 420.69 to the legit 1337 contract yesterday. Thanks!
2 · 1 · 26

foobar @0xfoobar · Jun 29
Anyone can create a token with any name and send it to any account. Not legit

What's the difference with ERC20 tokens? Well, while an ERC20 token represents a single type of asset, an ERC721 token represents a class of assets. In the case of CryptoKitties, its ERC721 token contract represents ALL the unique kitties in the game, as well as who owns which. (src: blog.coinmarketcap.com)

GME ERC-20 Token Activity and Holders 7/8/21 11A CDT

The ERC-20 token has seen a large amount of activity recently, with the largest number of transfers on 7/3. It appears they have loaded a large number of the tokens (over 50%) into Uniswap and distributed from there to a number of destination addresses. This token appears to be a scam.

@finestonematt would u be interested in conducting a AMA over on @EthfinanceR to discuss GameStop's #NFT platform & the rollup tech stack? Ethfinance is planning another AMA series & would love to see u there after enjoying your @BanklessHQ interview during the @loopringorg days.
