Potential GME Crypto Uses and Current Status 7/7/21
DD and Speculation by /u/schismsaints

NFT Collectibles

Confirmed: Gods Unchained, Crypto Kitties

Potential uses:
- Trade NFT in person (comic book store/trading card analogy)
- Used game trade in/digital licensing entitlement
  - allow legal ROM downloads of old school games for emulators?
- Wider NFT marketplace partnering with established companies like CryptoKitties

Smart contracts allow for extreme flexibility in allowing creation, minting, transfer, and destruction of tokens on the blockchain.

Crypto Swap/Exchange

Backed by ethereum, swap between altcoins/btc/eth
Could just partner with an established company (i.e. Coinbase/Binance)

List GME Coin and use it as a 'store currency', or even function as a stablecoin pinned to USD

Use an official GME app to interact with GME's platform, exchange between external wallets and GME Coin

Exchange GME Tokens for GME Coin (shareholder dividend redemption)
- if there is a way to purchase/auction/convert GME Tokens from an established cryptocurrency, there is some potential to alleviate some of the concerns that arose during the Overstock case where the token issued prevented any legitimate short selling in addition to abusive/illegal/naked shorting.

In-game item transfer/entitlement in between platforms (for cross-platform games). Possibility for a major partnership with Valve/Steam to allow for wider trading of their in-game digital items in-person at GME gaming cafes and store locations.

Shareholder Perk/NFT

Gamestop (GME) ERC-721 is a token with a quantity of 1 and a supply of 0. ERC-721 is typically used as unique NFT instead of ERC-20's fungible currency.

The ERC-20 token could be used as a dividend with a cash conversion ratio, whereas the ERC-721 token could be minted/issued one-per-shareholder as a unique shareholder ID NFT. Perhaps with an ID like 'shareholder # x' or 'share # x'? Essentially as a proof of concept for a blockchain backed securities exchange.

Could also be used as a special dividend, but may have issues similar to Overstock. The ERC-20 token is divisible and presumably mintable, so if there's a way to convert to/from it, that may be a more legally friendly avenue for a dividend.

Token Gamestop

Overview [ERC-721]

Max Total Supply:	0 GME
Holders:	1
Transfers:	1

Special Dividend/Crypto

GameStop (GME) ERC-20 is a token with a quantity of 69,420,000 minted. A large amount has been transferred into Uniswap (56%), and approximately 8.4% distributed amongst over 60 other holders as of 7/5/21 10P CDT

Yahoo! Finance reports an 'Implied Shares Outstanding' of 69.38M as of the same time.

Caution: there is some debate as to whether this is the scam coin associated with the game-coin.org website that no longer appears to be active. I have not yet had time to research further and have not found an archive of that website.

Shares Outstanding [5]	74.38M
Implied Shares Outstanding [6]	69.38M
Float	56.41M

Fungible vs Non-Fungible Tokens

Fungible are Interchangeable
Such tokens are interchangeable and can be exchanged with any other token of the equivalent kind. For example, fiat currencies are fungible. For example, $50 notes are interchangeable with other $50 notes. Similarly, one Bitcoin value can be exchanged with other Bitcoin, which makes no difference for holders.

Non-Fungible are Non-Interchangeable
Unlike Fungible tokens, such tokens are non-interchangeable as they cannot be replaced with the non-fungible token of the same type.

Fungible Tokens are Divisible
These tokens can be divisible into smaller units, and one can get any number of units, and it does not matter to holders as long as the value remains the same.

Non-Fungible Tokens are Non-Divisible
These tokens cannot be divided in any sense.

Fungible Tokens are Uniform
Each token is different from all other tokens of the same type.

Non-Fungible Ones are Unique
All tokens of each type are identical in specification, and each token is identical to each other. (src: blockchain-council.org)

Profile Summary [Edit]

Contract:	0x13374200c29C757FDCc72F15Da98fb94f286d71e
Social Profiles:	Not Available, Update ?

What's the difference with ERC20 tokens? Well, while an ERC20 token represents a single type of asset, an ERC721 token represents a class of assets. In the case of CryptoKitties, its ERC721 token contract represents ALL the unique kitties in the game, as well as who owns which. (src: blog.coinmarketcap.com)

GME ERC-20 Token Activity and Holders 7/6/21 1A CDT

The ERC-20 token has seen a large amount of activity recently, with the largest number of transfers on 7/3 and the largest transfer amount on 7/5. It appears they have loaded a large number of the tokens (over 50%) into Uniswap and distributed from there to a number of destination addresses. There is some debate about whether this is a legitimate token and I am still researching further to verify.
